Data extraction and document review

Our document review function uses artificial intelligence and other best-in-class technologies to accelerate data extraction from contracts and other documents. Whether the project involves clause extraction from thousands of contracts as part of a due diligence exercise or data mining from terabytes of data in response to a cyber breach, our document review capabilities can be customized to meet client needs.

Key benefits

Cost efficiency

- Careful selection of AI tools significantly reduces costs and promotes efficiency

Turnkey service

- Handle all workstreams through project lifecycle

Gain insight

- Customizable reports
- Structured data extractions

Strategize

- Strategic blend of on-demand legal advice and technical expertise

Our process

We deliver high-quality results at lower cost through attention to processes, project management, the strategic use of partnerships and delegation to lower-cost resources or jurisdictions. Each review and extraction project is unique and we provide bespoke arrangements of people, process and technology to address each project efficiently and effectively.

Data review and extraction projects involve finding specific information across thousands of contracts, and in the case of cyber breaches, determining which individuals or customers must be notified. We have the right lawyers, technical experts and project managers to advise you on your next strategic steps as well as technical implementation solutions to handle your matter with expert precision and efficiency.
